

Is Your Data Safe?

Cybercriminals and nation-state threat actors increasingly target commercial organizations within the Defense Industrial Base to steal sensitive government information and intellectual property or to hold systems for ransom. With emerging cyber threats on the rise, increased risk demands increased protection. In response, the Department of Defense (DoD) commissioned the Cybersecurity Maturity Model Certification (CMMC) program to assess contractor adherence to security standards.

Are You CMMC Ready?

The CMMC 2.0 final rule is in effect as of December 16th, 2024 requiring compliance verification as a pre-requisite to contract awards. Contracting Officers have begun adding the requirement for a CMMC certification to solicitations. Most contracts will require a Level 2 or higher certification performed by a certified third-party assessor to ensure that the organization has reached cyber maturity.

Our Approach

Before embarking, Poseidon learns about your business and technology environment to tailor right-size solutions to your organization. Whether you need comprehensive cybersecurity maturity implementation and management or targeted services, we can assist you. Our team can walk you through the steps to prepare for compliance:

- **Scoping** – Perform scoping of the business, technology, and compliance requirements.
- **Gap Assessment** – Review the existing security posture, assets, and flow of sensitive data to recommend an enterprise vs. enclave approach and the necessary tools and protocols.
- **Implementation** – Perform remediation, deploy infrastructure, provide technology solutions, and apply controls to the environment.
- **Preparation** – Provide a suite of templates, assist with documentation, and gather evidence artifacts for the assessment.
- **Ongoing Lifecycle** – Provide ongoing management to maintain readiness between triennial assessments.

About Us

Following the CMMC program since its inception, Poseidon has demonstrated thought leadership by providing expertise to industry organizations, lobbyists, private equity firms, and business leaders within the cybersecurity, defense, and technology verticals. As a trusted advisor to contractors, Poseidon offers comprehensive strategies with solutions tailored to each client’s business environment. Poseidon is a cybersecurity, information technology, and risk management solutions provider operating as a Service-Disabled Veteran Owned Small Business (SDVOSB) company headquartered in St. Petersburg, FL.

Service Offerings
